

AGIL OutputHub

AGIL OutputHub automates label printing directly from SAP S/4HANA, simplified by intuitive templates and dynamic data integration for any print environment.

AGIL OutputHub supports the connection to various data sources and design templates. This enables easy customisation to specific business requirements and ensures that labels are always updated with the latest information.

Your benefits

Boost your efficiency

Automate the label printing process and reduce manual effort and sources of error. With AGIL OutputHub, labels are printed exactly when and where they are needed, reducing production time and increasing accuracy.

Use flexible integration

AGIL OutputHub supports the connection to various data sources and design templates. This enables easy customisation to specific business requirements and ensures that labels are always updated with the latest information.

Seamless collaboration

External service providers and suppliers can use AGIL OutputHub to label sold goods in the customer design. This eliminates the need for re-labelling after the goods arrive at the factory and optimises the entire delivery process.

Functions at a glance

- ✓ **LabelPrint Queue Overview:** Centralised management of label and print jobs for maximum control and clarity.
- ✓ **Overview of source data:** Ensures transparency and accuracy of the data used for labels.
- ✓ **Overview of labels:** Provides a preview and checking option for labels before printing to minimise errors.
- ✓ **Templates:** Facilitates the creation and management of label templates for consistency and reusability.
- ✓ **Dynamic event triggers:** Flexibility thanks to various trigger mechanisms for the printing process, customised to individual requirements.

The solution covers all SAP best practice labelling processes.
